Response to Arguments

1. Applicant's arguments filed on August 06, 2004 have been fully considered and are persuasive. Therefore, the previous rejection has been withdrawn. Claims 20 – 22 have been canceled.

Allowable Subject Matter

2. **Claims 1 – 19 and 23 – 51 are allowed, renumbered as 1 – 48, respectively.** The following is an examiner's statement of reasons for allowance:

Regarding to the claimed invention, the prior art of record fails to show or render obvious of a method and its corresponding apparatus for decoding quantized and unquantized wanted data symbols from received signal samples, substantially comprising:

Processing a group of currently received signal samples to determine a corresponding current set of un-quantized wanted data symbols and an interfering waveform representative of a sum of other un-wanted data symbols by subtracting an amount of a previously decoded set of quantized wanted symbols and a previously determined interfering waveform from the signal samples intersymbol interference (ISI) related to previously decoded symbols; and

Quantizing the determined current set of unquantized wanted symbols to obtain corresponding quantized symbols.

Peterson et al. lacks of the step of subtracting an amount of a previously decoded set of quantized wanted symbols.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2631

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Peterson et al. (US patent # 5,761,237) discloses a method and its corresponding apparatus for multiuser-interference reduction.
